

Minutes of
Community Development Services
Study Session

January 6, 2003

Those Present: Perry Huston and Max Golladay

Also Present: Duke Senter, Jim Goeben, Mike Neer, David Taylor and
Catherine Dunn

Bull Trout

David Taylor reminded the BOCC that the Bull Trout meeting would be at the West Coast Motel from 6-8 PM, Tuesday, January 7. He said that he would be attending.

ARC IMS software

David Taylor reminded the Board that on December 22, 2001, he had come before the Board and asked about putting the ARC VIEW maps on the Internet.

Perry Huston said to expound on what is needed.

Mike Neer explained that ARC IMS is the software that gives the ability to put GIS product on a website.

Huston asked if this would be read only. Neer replied that he would like to see it set up like that of Yakima County which is somewhat limited with low resolution. Departments can control what data is put out and how. He said that he would like to have the orthophotos separated from the other information.

When asked the cost, David Taylor said it would be \$10,000 to start with an additional \$3,200 for a serverlet.

Duke Senter said that he thought Computer Services could run it for free. He said that once it was up and running, it should just go on by itself with minimal time spent. It is possible to use this as a revenue stream by selling information to companies and give them access to data over the web. He said that there is no ability to send this out to the web loose.

Perry Huston said that when this was first talked about, it was for commercial application and use by title companies or realtors for a fee.

APPROVED
4-1-03

Huston added that if there are 7 people using this instead of ARC VIEW it would have made up the \$10,000 in license fees. He asked how many hours it would take for the set up. He said to go ahead with the project.
