EXHIBIT "A"

SCOPE OF SERVICES

In addition to providing all material and labor, the Contractor shall perform the following:

- 1) Coordination with the owner's representative for site access; contact the OneCall Locate Center for utility locates;
- 2) Excavate 4 borings to depths of 15-20 ft or auger refusal, which occurs first; core and patch the concrete walkway where boring will be conducted;
- 3) Perform laboratory testing for select materials encountered at the site.
- 4) Prepare a geotechnical report including findings and recommendations for the site.

Exploration

The field exploration program will include borings with a limited access track drill rig equipped with hollow stem augers capable of reaching the desired depth. If groundwater is encountered, the field geologist/engineer will record the level at completion. Disturbed samples of the subsurface material will be collected for appropriate laboratory testing and analysis. Borings will be backfilled per Washington State DOE regulations. We will notify you of our exploration program and to gain site access.

Laboratory Testing

An experienced engineering professional will visually classify the samples obtained in the field. We will conduct laboratory testing to determine the physical and engineering properties of the onsite soils.

Test

Particle Size Analysis
Moisture Density Determination

Engineering Analysis and Report

We will conduct an engineering analysis using the data acquired from the subsurface exploration activities and laboratory testing to estimate foundation design parameters to support the anticipated building loads. From the results of borings we will determine the depth of native soils and that of native soils/fill material near basement wall as well as present angle of line of influence of footings and bearing pressure at native soils and

bearing pressure at existing fill material. We will present our recommendations in a written report. Our report will include a section addressing site geology,

The report will include the following items:

- A site plan showing boring locations;
- Boring logs indicating soil stratification, SPI values, classification, and groundwater levels where applicable;
- Allowable foundation bearing pressure, passive soil pressures, angle of internal friction, coefficient of horizontal friction for footing design, anticipated settlement;
- Frost depth for foundation embedment;
- Soil parameters for design of below grade wall including soil friction angle, unit weight and equivalent fluid pressures (active, passive, and at-rest cases);
- Seismic considerations to include Site Class, Soil Profile Type and Seismic considerations per 2006 IBC;
- Recommendations for temporary excavation, safe slope, excavation bank stability;
- Determine the suitability of on-site soils for reuse as structural fill; Recommendations for the placement and compaction for structural fill and backfill.

Two (2) copies of the signed and stamped geotechnical (soils) engineering report will be submitted. An advance electronic (pdf format) copy of the geotechnical report will also be submitted to the client. The services will be performed in accordance with generally accepted standards of the geotechnical engineering profession. The project will be overseen by a professional engineer registered in the State of Washington.

Schedule

Upon notification to proceed we will begin coordinating availability of a limited access drill rig which generally takes 3-5 working days. An underground utility locate notification will be completed prior to field activities. We will begin laboratory testing immediately upon the completion of our field exploration. We anticipate submitting our geotechnical soils investigation report in approximately two (2) week subsequent to our field borings.

Cost

The range of cost for the geotechnical scope of work outlined in this proposal will be between \$6,500 and \$7,000.
