Good Afternoon Chace,

The septic system for this project (permit # os-23-00184) is designed to treat and dispose Domestic Wastewater or Residential Sewage. Residential sewage means sewage having the constituency and strength typical of wastewater from domestic households. A “Harvest Module” as described in the application attachments would produce Industrial Wastewater. Industrial wastewater means the water or liquid carried waste from an industrial process. These wastes may result from any process or activity of industry, manufacture, trade or business, from the development of any natural resource, or from animal operations such as feedlots, poultry houses, or dairies. The term includes contaminated stormwater and leachate from solid waste facilities. Industrial Wastewater typically exceeds the waste strength of typical residential sewage and is not addressed in WAC 246-272A. We would not approve this type of connection to the existing septic system. The applicants should work with a Professional Engineer to develop a plan for the wastewater produced by the “Harvest Module”

Thank you,

Dan Suggs, B.S. Environmental Health Specialist II
