Hi Chace,

Thanks for the update! It sounds like our efforts to assuage WDFW have run afoul of Public Health. I've included additional information below to address Public Health's concerns regarding the waste/wastewater treatment proposed on for this project.

At no point will industrial waste entering the septic system exceed the level and type of waste typical of a single family residence or the design standards for the recently installed system. Waste generated from the site will be diverted to an appropriate disposal site based on the type of waste.

The new septic system is currently hooked up to an existing bathroom and processing room on the property, which send typical wastewater(gray/black water from the bathroom, gray water and household cleaning agents from a sink) to the system. When the harvest module is installed, it will receive the same gray water and cleaning agents as the processing room currently sends to the septic system. In both the existing and proposed conditions, the septic system receives waste similar to that of a residence. The septic system was designed by Mark Nelson with this capacity/demand in mind and it will not receive blood, viscera, or other animal/industrial waste, including animal waste from the proposed holding pen (note this change from our prior conversations).

Blood from the harvest module will be redirected into a separate container attached to the harvest module. This container will be emptied daily into a new compost pile, established in an upland location on the farm at least 250' away from Park Creek and designed to ensure no runoff reaches the creek. An on-farm composting license will be obtained, if required.

Viscera and other unusable animal parts will be separated out into a second container attached to the harvest module and picked up by a licensed rendering service for transport and rendering offsite.

To ensure this waste management approach continues to address WDFW's concerns regarding the holding pen's proximity to the stream, the holding pen will be constructed with a curb wall to contain any waste resulting from temporary animal storage. The pen will be lined with an absorbent material, such as sawdust or wood shavings, to contain any liquids in the pen and will be emptied into the compost pile noted above daily.

I trust this response addresses Public Health's and your concerns regarding waste management for the proposed development. Please let me know if you require any additional information.

Alex

Subject: CU-23-00006 Honest Cut Meats LLC - Public Health Update

Good morning Alex,

I have been communicating with Kittitas County Public Health regarding the on-site septic requirements for the proposed Honest Cut Meats harvest module. They have concerns with the recently installed septic system being used with the proposed harvest module. I wanted to pass their message along to you. Also, attached is a request for information to address the septic concerns. Please feel free to reach out to me with any questions.

Thanks,

Chace Pedersen
