Rachel –

Attached is a map of the two monitoring wells that are known to be on the Reclamation property involved in BL-20-00030. In researching the well logs on the Ecology website, there are six monitoring wells on Reclamation property in the area. All other wells have been decommissioned. I am having to go back to Ecology to get information on which is which or if some of the six they show have also been decommissioned or were temporary testing sites. Would you pass this on to Public Health? If this does not suffice for their information, i.e., no wells for irrigation or potable water, then I will pass on info I get from Ecology.

Thank you!
