

Kittitas PUD Bettas Road Substation Expansion

Project Narrative

The Kittitas PUD Bettas Substation Expansion project is a proposed extension of an existing Bonneville Power Administration (BPA) electrical substation. The purpose is to improve the electrical service provided by the Kittitas PUD to the PUD customers in the surrounding area. The new station will provide improved reliability and added capacity to accommodate the growing electrical load of the county. The proposed boundary line adjustment would “swap” an equivalent amount of land between BPA to Kittitas PUD. The existing parcels are non-taxable public owned parcels, so the BLA would not change any overall exempted properties from the tax role.

Note: No water system or sewer systems are proposed as part of this project.
