Based on the amendment to question #9 on the Conditional Use permit application-SEPA questions, Public Health accepts the conditions for the water supply and sewage disposal as is noted on the submitted amendment from TJ McDonald that was received by email on January 5, 2015. It is our preference that the applicant mitigate for potable water in the future to provide a safe and reliable public water system for future employees.

This is an amendment to question #9 on my CU-14-00005.

Water Supply:

When our operation initially begins we plan to truck in water from Water 4 Hire, who is a local licensed water vendors. Trucking water is not a long-term solution, as our operation grows we plan to either purchase mitigated water rights or use our properties irrigation water.

Sewage Disposal:

Our domestic septic system will handle our sewage waste.
Our non-organic trash will be disposed through our already in place trash service.
Our organic material will be composted and worked back into the land.
We will not use any burning practices unless further permits are filed to allow such use.

Thank You,

TJ McDonald
