Glover Road Bridge Repairs

Location:
This project is located south east of the City of Kittitas just north of I-90.

Project Description:
This project completed repairs on the old 1955 era wooden bridge that crosses Parke Creek on Glover Road. The bridge had an untreated timber deck that was decaying. The bridge was posted for a 3 ton capacity. After the County replaced the deck in 2012, additional decay below was noted. The new deck was lifted off the supporting structure, which allowed County crews to demolish the old bridge supports and replace them. The bridge now has a 25 ton capacity.

Funding:
County funds were be used to pay for this project.

Updated 3/11/2015
Schedule:
The project is complete.

Road History:
Glover Road was originally called Johnson Canyon Road (prior to the construction of I-90). The road was south of the Milwaukee, Chicago & St. Paul Railroad tracks and followed Johnson Canyon, and was obliterated by the freeway construction, excepting the short portion that remains.

Decaying bridge deck on Glover Road Bridge
Piping Parke Creek through while pulling the old decaying timber stringers and running planks
Placing ecology blocks for bridge support
