

## EXHIBIT 5 - LANDSCAPING PLAN

The proposed PUD landscaping plan will include the growing of pastureland throughout the irrigated property. On the southerly hillside the forested land will be maintained. Gardens, hardscape, and grass will be used in landscaping around the residential areas. All driveways will have gravel placed on them or be hard surfaced to control dust and provide a safe riding surface for equestrian use. As all of the driveways are located in areas that are used either for both access to the home sites or as equestrian riding trails located throughout the property portions of driveways will not be hard surfaced with asphalt.
