

The purpose of this project is to protect our diversion for the Adams Ditch. At the northern work area ~~will~~ we will relocate 15 cubic feet of material from the east side of the Yaneum Creek channel, no digging. Approximately 40 feet downstream we will move 15 cu' material from the west side of the channel to the east side, no digging.

During flooding the high water in the spring the river-rock has built up forcing some of the creek water out of the channel and flooding the headgate of our diversion. We have put in a new headgate that cost \$11,200. We do not want it damaged. We irrigate approximately 625 acres out of this ditch.

We have Alan Ormice's permission to work on his property.
