We would like to voice our concern about the Anderson Short Plat. On this property there are water issues that are not listed by the county as a flood zone. Between the months of April thru October, there is water running across that property. It runs back into the creek at our property line. Lots E-2 and F-1 are the main concern. If septic tanks and drainfields are placed in the wrong location, sewer water from those systems will flow into the creek. At the extreme, there could be well water contamination if this surface water issue is not addressed.
