

To whom it may concern,

I received a letter from the county wanting written comments on the Pfenning Plot SE-25-00009. I live directly south of the proposed development on 044734. My concern is Lyle Creek, noise pollution and set backs to my property. Lyle Creek is my supply for irrigation along with it being a natural habitat for wild life including wild ducks, muskrats, blackbirds, red winged blackbirds and raccoons. It is not a part of the cascade irrigation system but is controlled by the district as it crosses their canal. I would ask that it be kept in it's natural shape and form with no diversion of the waters for irrigation purposes which would vary the flow of waters. Noise pollution is also a concern during the building process and a standard noise ordinance be held after completion. Is this going to be city property with city set backs or county set backs?

Thanks,

Dennis and Mary Emmons
