Hello -

I want to voice my concerns regarding this application. In reading through the documents, the applicant noted "none known" to the question regarding wildlife. It is well known that there is significant wildlife in the location of the proposed septage ponds - deer, elk, raptors and other birds, including probable nesting sites.

The risks to wildlife and to Parke Creek should the ponds fail or leak/seep into the water systems could be immense and devastating. And, as a resident living not far from this location, I can't imagine what the odors will be coming from the ponds and/or the application to local fields.

My husband, Jeffrey Ratte, and I strongly object to this project being approved and moving forward. Thank you for considering the people, wildlife, air and water quality issues when reviewing this application, and for doing the right thing (I hope).
