**CONSTRUCTION NOTES**

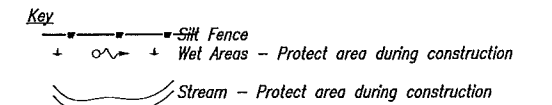

All materials and workmanship shall be in accordance with the requirements of the Washington State Department of Transportation Standard Specifications for Road, Bridge and Municipal Construction dated 2014, with amendments.

If the Contractor finds conflicts between these plans and field conditions, the Contractor shall notify the Engineer for resolution of the conflict. Work in the area of the conflict will not proceed until it is resolved by the Engineer.

All utilities and drainage structures are existing unless noted otherwise.

**TEMPORARY EROSION & SEDIMENT CONTROL NOTES**

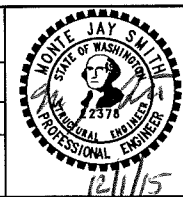

1. See all notes in the permits which are contained in the Specifications.
2. Install silt fence per Std. Plan I-30.15
3. Seed all disturbed areas. See Special Provisions for additional planting requirements.
4. The implementation of these Erosion & Sediment Control (ESC) plans and the construction, maintenance, replacement, and upgrading of these ESC facilities is the responsibility of the Contractor until all construction is completed and approved and vegetation/landscaping is established.
5. The ESC facilities shown on these plans must be constructed in conjunction with all clearing and grading activities, and in such a manner as to insure that sediment and sediment laden water do not leave the site.
6. The ESC facilities shown on these plans are minimum requirements for anticipated site conditions. During the construction period, these ESC facilities shall be upgraded as needed for unexpected storm events and to ensure that sediment and sediment laden water do not leave the site.
7. The ESC facilities shall be inspected daily by the Contractor and maintained as necessary to ensure their continued functioning.
8. The ESC facilities on inactive sites shall be inspected and maintained a minimum of once a month or within 48 hours following a major storm event.
9. If any channel of water enters the construction area, either separate the channel from the construction area with a barrier such as sand bags, or divert the channel around the construction area through a pipe with sand bags at each end to force the water in the pipe and keep it out of the construction area.
